stay connected indoors... and in the great outdoors

Whether around the home or out in the open, there are always good reasons to keep in touch. The Kenwood FunKey 446 two-way radio gives you the freedom to talk – instantly – wherever you go.

We've designed the FunKey 446 to the same exacting standards as the professional radios we supply to security and emergency services, the armed forces and other demanding users throughout the world, including many leading motorsport teams.

So, you can be assured that each FunKey 446 comes with the same reputation for ruggedness, reliability, useful features, superb reception and value as every two-way radio carrying the Kenwood name.

The Kenwood FunKey 446 – it's as serious about communications as you are about performance

Group Mode

To avoid hearing other groups transmitting on any of the 8 primary channels in crowded areas, select the Group Mode function and choose a CTCSS number from 1-38. This feature operates on all 8 primary channels and allows you to select the best channel combination for clear communications with friends in your group, anywhere, anytime.

Talk Groups

Secret Mode

If you want to hold a private conversation, or block other users from listening when in Group Mode, activate the Secret Mode feature.

** Requires Group Mode to be active on all radios.*

Auto Channel Select

FunKey 446's Auto Channel Select feature automatically searches across all channels and begins reception as soon as a vacant channel is found. FunKey 446 radios set to the same Group Mode can automatically search out, and lock onto, a vacant channel using this feature*.

Loudness

Using the radio in crowded, noisy environments can cause interference, making it difficult to hear an incoming message. By selecting the Loudness feature, you can boost the volume level at any volume setting to cut through background noise.

High Performance Antenna

The FunKey 446 is equipped with a high performance helical antenna to pull in even the weakest signals. The antenna is designed to swivel around 180° to fold flush with the back panel when not in use.

10 Call Tones

A total of 10 different call tones are programmed into your FunKey 446 – 6 ringer tones and 4 melody tones allow you to select the call tone to suit the situation.

Hands-Free VOX Operation

FunKey 446 is equipped with a VOX feature that allows you to transmit simply by speaking. Ideal for situations like cycling or climbing where you need both hands free, and equally useful when your FunKey 446 is used at home as a baby monitor.
